

**FOI Request: Wi-Fi Contract**  
**Our Reference Number: 1314199**

ICT Services are provided to Southend CCG by Central Eastern Commissioning Support Unit. Please see their response below:

The CSU provides corporate Wi-Fi access to around a dozen of the larger CSU supported sites across the Essex region, there will be a small number of additional sites that have a standalone Wi-Fi access point that is un-managed. We don't currently provide 'guest' Wi-Fi at any sites and where we do offer the corporate Wi-Fi it is supported as a standard part of the LAN by in house staff and not outsourced.

The corporate Wi-Fi is provisioned using cisco equipment end to end which is managed by the in house network engineers and provides access to n3 services the same as the wired lan in those locations, radius authentication of both the device and user is required to allow access against valid active directory accounts using cisco acs radius appliance and the access points are managed via cisco wcs appliances. Wi-Fi is available to all CSU supported staff with a valid active directory logon and a CSU supplied device that is also a member of the active directory domain.
